

These Are the Top Five Cybersecurity Threats Your Business Faces in 2021

Hacking the home

With more people working from home, the number of devices connected to the internet has increased. The evolving world of the connected lifestyle gives hackers more potential entry points to homes and consumer's information through devices, apps, and web services.

Beware of the 'wares'

Cyber Security analysts believe that threats from all the wares such as ransomware, malware, spyware, scareware and adware will remain one of the biggest concerns for security teams in 2021.

Cloud-based threats

Cloud computing has accelerated since early 2020 due to the pandemic. Many companies have opted in to transforming and leveraging online tools.

QR code abuse

Scammers and cyber criminals are quick to exploit new technology for their tricks. Hackers find opportunities in exploiting social engineering to gain access to a consumers personal data in a single scan.

Phishing

Phishing is one of the most common cyberattacks due to the high level of interaction humans have on the internet. Phishing scams usually occur through social engineering in traditional email and cloud services attacks.
